The graph displays the daily count of COVID-19 cases in the United States. The y-axis is logarithmic, with major ticks at 100,000 and 1,000,000. The x-axis spans from October 2019 to April 2020. A red dashed vertical line is positioned at approximately March 1, 2020. The data shows a period of low case counts (mostly below 100,000) from late February to early March, followed by a rapid ascent to a peak of over 1,000,000 cases in early April, and then a subsequent decline.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the beginning of December 2020. The data shows a period of fluctuating case counts between October and November, followed by a sharp increase to a peak of approximately 20 cases in late December. After this peak, there is a rapid decline, and the number of cases remains relatively low and stable through April 2021.
