The graph displays the daily count of COVID-19 cases in the United States over a 12-month period. The x-axis represents time, with labels for Oct 2025, Jan 2026, Apr 2026, Jul 2026, and Oct 2026. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (near zero) from October 2025 through early April 2026. Starting in mid-April, the case count rises sharply to approximately 40,000 and remains relatively stable until late May. In late May, there is a significant spike to nearly 100,000 cases, followed by a sharp decline to around 20,000 cases by early June. The case count then fluctuates between 20,000 and 40,000 until late July, where it drops to near zero. It remains at zero until late August, when it rises again to approximately 40,000 cases and stays there until the end of the period in October 2026.

The chart displays the monthly evolution of the 'Indice de confiance' (Confidence Index) from October 2025 to October 2026. The index is represented by a black line with circular markers at each data point. The y-axis ranges from 0 to 30, and the x-axis shows months from October 2025 to October 2026. The index starts around 15 in October 2025, fluctuates between 10 and 25 until February 2026, then drops sharply to around 10 in March 2026. It remains relatively stable around 10-15 until June 2026, where it peaks at approximately 25. Following this peak, it drops sharply to around 10 in July 2026, then to a low of about 5 in August 2026, before rising back to around 15 by October 2026.
