The graph displays the daily and weekly number of COVID-19 cases in the United States. The blue line with circular markers represents daily case counts, while the red square markers represent the 7-day moving average. The y-axis is logarithmic, with major ticks at 100,000 and 1,000,000. The x-axis spans from October 2025 to July 2026. Significant peaks are observed in late October 2025 (reaching approximately 800,000 cases), late December 2025 (reaching over 1,000,000 cases), and early July 2026 (reaching approximately 800,000 cases). The data shows a pattern of periodic surges followed by periods of relative stability at lower case counts.

The graph displays the 'Index' over time. The x-axis is labeled with months and years: Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The y-axis represents the index value, with a grid line at 100. The index starts at approximately 100 in October 2025, remains relatively stable with minor fluctuations until late January 2026, where it drops sharply to about 40. It then recovers to around 100 by late February 2026. From late February to early April 2026, the index shows a significant downward trend, reaching a low of approximately 20. It then recovers sharply to about 100 by mid-April 2026. The index remains at this level until late May 2026, when it drops again to about 40. It then recovers to approximately 100 by late June 2026. Finally, it drops to about 40 in early July 2026 and recovers to approximately 60 by the end of the period shown.

The graph displays the monthly average of COVID-19 cases in the United States. The x-axis represents time, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a highly volatile trend, with a significant peak in late 2025, followed by a sharp decline and a subsequent rise in early 2026.
