The scatter plot displays the number of deaths over time. The y-axis represents the number of deaths, ranging from 0 to 100 in increments of 20. The x-axis represents time, with labels for Jul, Oct, Jan, and Apr. The data points show a sharp increase in deaths starting in late September, peaking in early October, and then declining. Two vertical dashed red lines mark the start and end of the period of high mortality. A solid grey vertical line is positioned between the two dashed lines.

The scatter plot displays the number of deaths over time. The x-axis is labeled with months: Jul, Oct, Jan, and Apr. The y-axis represents the number of deaths, with a scale from 0 to 10. The data points show a significant increase in deaths starting in late September, peaking in early October, and then declining. Two vertical dashed red lines are present, indicating specific dates in late September and early October.

The scatter plot displays daily COVID-19 deaths in the US. The y-axis is labeled with values 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis is labeled with months: Jul, Oct, Jan, Apr. Two vertical dashed red lines mark the start of the first and second waves. The first wave shows a sharp increase in deaths starting in late July, peaking at approximately 90,000 deaths in early August, and then declining. The second wave begins in late October, peaking at about 80,000 deaths in early November, followed by a decline. There are very few deaths recorded between the two waves, and a small number of deaths are shown in April.
