The graph displays the daily count of COVID-19 cases in the United States. A red dashed line indicates the start of the data series in late September. The data shows a period of low case counts from late September to early January, followed by a sharp increase in early January, peaking at approximately 100,000 cases, and then a decline and subsequent rise in April.

The graph displays the daily number of COVID-19 cases in the United States from September to April. The x-axis represents time, with labels for 'Oct', 'Jan', and 'Apr'. The y-axis represents the number of cases, with a scale from 0 to 1,000,000. A vertical dashed red line is positioned at the beginning of the data series in late September. The data shows a general upward trend with significant fluctuations, including a major peak in late March/early April reaching nearly 1,000,000 cases, followed by a decline and then a slight increase again in April.
