The graph displays the daily number of COVID-19 cases in the United States from September to April. The y-axis represents the number of cases, with major grid lines at 0, 10, 15, and 20. The x-axis shows the months from October to April. A vertical dashed red line is positioned at the end of December, indicating the start of the 'lockdown' period. Before the lockdown, the number of cases fluctuates significantly, with a notable peak in late December/early January reaching over 20 cases. Following the lockdown, there is a sharp decline in cases, and the number remains relatively low and stable through April.
