The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for October, January, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. A vertical dashed red line is positioned at the end of October. The data shows a period of low case counts (mostly below 10,000) from October through late December. Starting in early January, there is a significant surge in cases, reaching a peak of approximately 100,000 in early January. Following this peak, the case counts fluctuate, with another notable peak around mid-February, before showing a general decline towards April, where cases are again mostly below 10,000.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from October to April. A vertical dashed red line is drawn at approximately December 20th. The data shows a period of relative stability in October and November, followed by a sharp increase starting in late December. Cases continue to rise through January and February, peaking in late February at nearly 100,000. This is followed by a period of high volatility, including a very sharp drop in early April, before rising again towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is logarithmic, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A red dashed vertical line is positioned at the beginning of the data series in late October. The data shows a period of fluctuation between approximately 100,000 and 500,000 cases from October to late March. A massive spike occurs in early April, peaking at over 1,000,000 cases, followed by a sharp decline and a slight uptick by the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of increasing cases from October through mid-November, followed by a sharp decline and a period of low case counts through April. A vertical dashed red line is positioned at approximately November 15, marking a significant point in the timeline.
