B530-A-% rCV

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis shows the months from October to April. A red dashed vertical line is positioned at the beginning of March, indicating the start of the nationwide lockdown. The data shows a very high initial peak in late September, followed by a period of relative stability and minor fluctuations between 1,000 and 5,000 cases. Following the lockdown, there is a significant and sustained decrease in the number of daily cases, with most days reporting fewer than 1,000 cases, except for a sharp spike in late March.
